

Welcome!

Welcome to Presentation of Elsa

Welcome to my
presentation, today I
will talk about the life
cycle of the butterfly

Hi

Nature plays a crucial role in sustaining life. Forests clean the air, oceans regulate climate, and soil grows our food. A healthy natural environment ensures clean water, breathable air, and resources for generations. Preserving nature is preserving life itself.

Oceans cover over 70% of the Earth's surface and play a central role in regulating temperature and supporting life. They are home to millions of species and provide food and jobs for billions. Pollution and overfishing put immense pressure on these fragile ecosystems.

WILDLIFE AND BIODIVERSITY

This is the end of my
presentation, thank you for
listening and Goodbye.

THANK
YOU
